

Dry Hip GRP Support Tray HST3

Product

- Weight 1.5kg/m²
- Class 3/SAB fire rating
- Length 3m
- Hip support tray lifts and supports hip tiles in a dry hip system

Installation

The hip support trays should be fitted from the bottom of the hip up. The first tray should be cut to suit the angle and overhang of the tiles at the eaves

Nail the tray to the hip batten using the fixings provided (item 7) ensuring it is centrally located on the batten. Fix further trays on the hip ensuring that a 100mm lap is made on the tray below.

To enable two hips to meet at the ridge the trays should be mitred at the internal angle
