VPU TAPED

TAPED VAPOUR PERMEABLE UNDERLAY

Single Taped VPU

- Improves wind uplift performance
- Single taped for ease of application
- 102gsm and 125gsm options

NEW

ariel[®]
www.arielplastics.com

Ariel's single taped underlays are used to seal horizontal laps, contributing to increased thermal efficiency by reducing air infiltration and convective heat loss, whilst improving wind uplift performance.

- Single taped product for ease of application and flexibility of joint position.
- Less bulkier than dual taped products
- Reduced waste compared with a dual taped product as roll width can be reduced to suit site requirements
- Hot melt pressure sensitive adhesive well suited to polypropylene
- Excellent adhesion and quick stick abilities
- High levels of loop tack, peel adhesion and heat resistance
- Tape bonded product performs extremely well at low temperatures
- Addition of UV stabiliser to the adhesive offers excellent durability of the joint

Taped VPU Options

Code	PG	Disc	Product Description	Colour	Width mm	Length m	Pallet Qty	Price £
